South Headquarter in Niepolomice

Since 2013, the company's headquarter is located in the southern part of Poland, in the Niepolomice Industrial Zone near Krakow.

Last year, we completed the expansion of the exhibition and warehouse hall. We are in the course of the last construction works related to the extension of the office part for our employees.

North Company branch in Bydgoszcz

Due to the dynamic development of the company, we have opened another Dematec branch in the northern part of Poland in Bydgoszcz.

Dematec Bydgoszcz is located in the Bydgoszcz Industrial and Technological Park in the newly built Technology Center. The new location serves as a smaller exhibition center for our machines, where training and implementation are also carried out.

SERVICE

DN Solutions combines its 50-year experience and product manufacturing history with the latest technology. In carrying on its business, DN Solutions, as a market leader, is driven by two long-term goals: market differentiation and high quality. DN Solutions people believe that the future can be shaped by new, state-of-the-art technology. DN Solutions is building a business network allowing it and its customers to work together with a view to achieving and maintaining leadership position in the machine tools market. Thanks to its reputation for high reliability, built over decades, DN Solutions has attained renown and prestige in global markets.

An aerial photograph of a city, showing buildings, roads, and green spaces, is overlaid with a semi-transparent blue filter. The text is centered on the image.

**We offer over 500
machine models
DN Solutions**

The Murata Machinery company was established in 1935. The Company boasts a long history; it has successfully embraced technological development and developed a number of reliable mechanical and electronic technology solutions. Muratec's R & D Center was founded by Murata Machinery. This organization offers technological expertise in the following areas: fabrics/machinery, machine tools, automated systems, communications equipment, systems. Hardware technology which is constantly updated to keep abreast of new developments is natural for machine tool manufacturers such as Murata, but the Company also focuses on software development, offering its customers optimal production and technology applications and providing support customized to meet individual customers' requirements.

PRECISION TSUGAMI

Tsugami Corporation was established in Nagaoka-shi, Niigata in 1937. Precision and speed are the hallmarks of TSUGAMI machine tools, which make them recognizable all over the world. The Company offers high precision products, based on precision technologies, that meet the customer's requirements. Faced with the challenge of fast evolving technologies, Tsugami is deploying its best efforts in the R&D area. "Looking ahead, we are going to take onboard direct feedback from our customers and anticipate their needs, we are determined to stay focused on product development, with special emphasis placed on automatic lathes, grinders, machining centers and other machines for precision machining, in order to ensure the customer's full satisfaction."

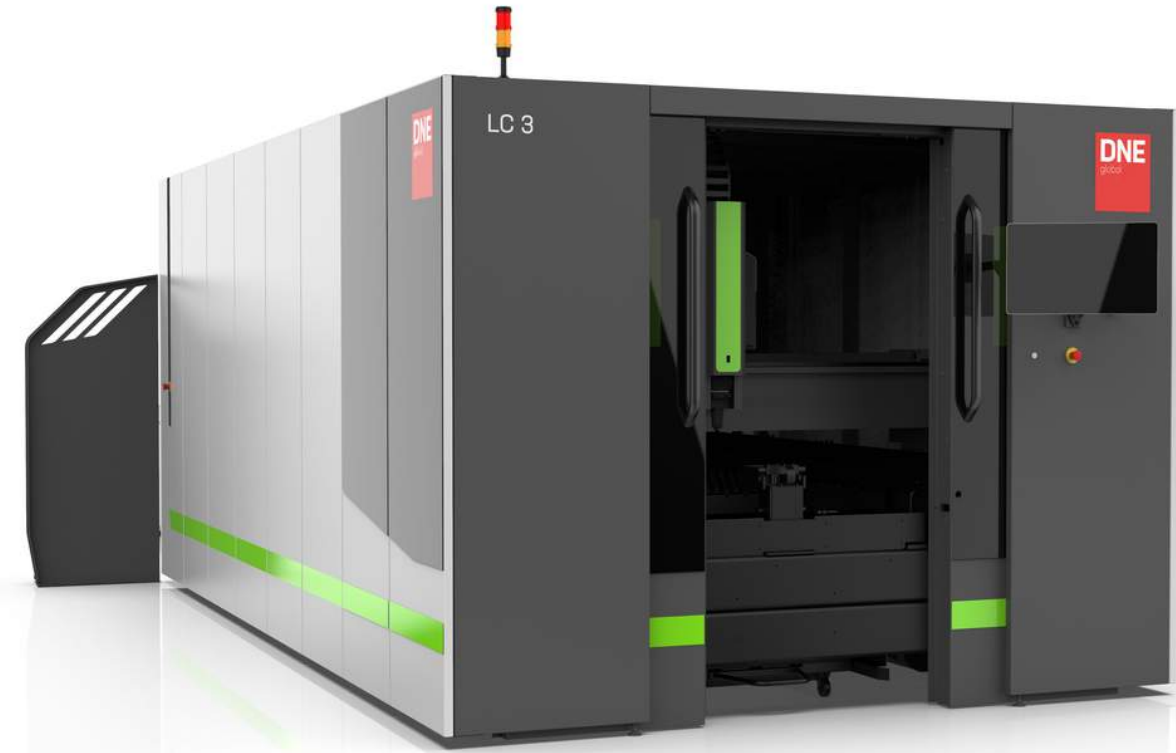

COBOTS

Collaborative robots from Doosan Robotics can be applied to various production processes. From simple to precision tasks, and provide optimized solutions with a variety of lineups.

Doosan Robotics

Laser cutting machine DNE Global LC 3

The smart way to process sheet metal. Combining industry-leading value with the quality (and reliability) of Swiss engineering, our LC 3 fiber laser cutting machine offers you all the performance and speed you will need to succeed in the sheet metal processing business.
